

Site Q Panel 1 (Grolier) = La Corona Panel 3						Initial Series Long Count and Calendar Round may refer to different dates.			
(9	8	11	16	8)	3 Lamat	11 Zotz'	(CR as written, disregarding Long Count; lunar series no better for this date.		
							(Venus maximum as evening star on this date, the CR as written)		
							(Venus maximum as morning star at date of Initial Series Long Count)		
9	9	2	0	9	(4 Muluc	2 Zotz')	Birth	(titles) Ixim Chak Nahb Kaan	A1-D3
							Moon age "5" [3.9], but M# "2M" [3F] and "G5" [G8] "29" [30]		
							u- ^{ya} YAL (child of mother)	"inverted-jar" Ixim Lady ^{ka} Kaan	C4-C6
							u-MIHIN-il (child of father)	2-K'atun Ajaw Sak Ma-su	D6-D8
		(10	2	0)			(Distance between day after CR written and LC written is (10 x 364).		
							Could this be deliberate? Notice the theme of "Muluc" days.)		
(9	8	11	16	9)	(4 Muluc)	(12 Zotz')	(One day after the explicit Initial Series Long Count. This CR is 2 K'atuns before 9.10.11.16.9. the date implied by the distance number 5.19.)		
	1	4	0	[0]			DN if omit 2 days from the DN as written 1.4.0.2		
							(Mercury maximum as morning star at next date;		
							Jupiter near 1st stationary; Saturn 22 days before 1st stationary.)		
(9	9	15	16	9)	[12] Muluc	[17] Pax	jaguar paw touch cushion	Ixim Chak-Nahb' Ka'n-n ^u	E4-F5
							Perhaps an heir designation? The 2 K'atuns divides as 1.14.0.0 + 16.0.0		
					"10" Muluc		if we read 12 instead of "10" Muluc, and 17 instead of the impossible 16 Pax.		
						"16 Pax"	"16" of any month is not compatible with any day "Muluc"		
							So substitute 17 Pax. But 16 (month) would be OK with a (3) "Lamat".		
		(16	0	0)			(DN hypothesized as omitted, to complete the interval 2 K'atuns.)		
(9	10	11	16	9)	(13 Muluc)	(17 Keh)	(CR and Long Count required if next DN 5.19 is taken as written.)		
			5	19			DN as written
